

## Cyber warfare: a real world [Iran] demonstration

by peptide *Sunday, Jun 28 2009, 4:27am*

international / social/political / opinion/analysis

### Twitter and texting deployed in War

We announced the death of laissez-faire capitalism when that system ingloriously failed – yes, Virginia, regardless of how they dress up the free market corpse, it's DEAD! So too we must join the voices heralding the success (and failures) of the first REAL cyber war, the one currently being waged in IRAN -- for the benefit of those that live in wombat burrows!

***Violated***

The war is between the U.S. ruling elite and the Iranian ruling elite. The current status is the clerics are on the canvas – and serves them bloody-well right! An old adage here applies, the 'cleric' who hesitates is lost – are you watching all this, Uri and Han or are you doing the Kosovo 'double-shuffle' AGAIN, you useless pricks?

The USA recently announced, and continues to make PUBLIC statements, of their new Cyberware Strategies yet you were all caught napping! The sudden breach, intervention and 'repair' (monitoring) of the undersea digital optical cable connecting a large section of Central and South Asia to the world should begin to make sense now!

But this short piece will confine itself to Iran only; we do not wish to strain the brains of conservative Iranian clerics and their Russian and Chinese allies – you useless dummies.

The Americans/Israelis virtually advertised this war on billboards but you somehow managed to miss it! You hadn't even read or properly assessed U.S. cyberwar news bulletins, which OPENLY STATED how, in the event of cyber attacks, the USA would shutdown or severely limit the use of digital public networks in order to safeguard critical infrastructures.

The USA has of course made provision to separate vital and public networks in preparation for cyber 'events' -- but of course you missed that too! So now you have some real consequences to deal with, there is no turning back, so INNOVATE! And Han, 'innovation' does not include (contractive) filtering software to be installed on every personal computer! You people invented the Tao, APPLY IT! You must adapt to prevailing forces and use them to your advantage in exactly the way America has utilised digital methods to overwhelm the ruling elite of Iran – the energy/means are already

available turn it to YOUR advantage - you taught us, remember?

Leopards and consultants do not change their spots, which is why a high turnover of these types is essential/imperative. Allow natural selection to occur in ALL environments, especially those related to modern digital communications -- the more skilled must be allowed to displace leaders and assume primary positions, or FAILURE is inevitable!

The vanguard of our hacker elites are kids, their average age is 19! Do you remember the peak performance age of a jetfighter pilot? How much more is that 'edge' required in digital warfare? The current discomfort you feel is a star-spangled digital dick up your star-crescent arses!

CONTRACTIVE measures/technologies are self-defeating in these situations the tide must be turned by allowing a free, specifically Persian/Iranian, cultural identity to FLOWER via the digital medium, lest a foreign identity displaces it! Is a 'Mickey Mouse' or 'Ronald McDonald' able to compete with a Jalal'uddin Rumi? Use available technologies to your advantage and build a fiercely proud NATIONAL IDENTITY with these means! It already exists, notwithstanding it is underexploited? Rout the 'rot' and turn the digital tide!
